RE: Fee Proposal for Civil Engineering Services
Various Roadway improvements including:
Essex Dr. Extension, from End of existing Essex Dr. to Paul Hand Rd.
Paul Hand Rd. improvements, from Louisville & Indiana Railroad to Graham Rd.
Paul Hand Road and Graham Road Intersection Improvements
Franklin, Indiana

Dear Mark:

CrossRoad Engineers is pleased to present this Scope of Services and Fee Proposal to provide professional services associated with the three project areas listed above. Further descriptions of work are as follows:

Essex Drive Extension: This project will begin at the termination of the existing Essex Drive and head north to the intersection of Paul Hand Road for a distance of approximately 4,100 ft. The roadway will be developed as a 2-lane road with shoulders, terminating at Paul Hand Road in a stop condition. Turn lanes may be required at the intersection with Paul Hand Road. The alignment will be coordinated with the development.

Paul Hand Road improvements: This project will begin at the right-of-way of the Louisville & Indiana Railroad and head east to the intersection of Graham Road for a distance of approximately 3,600 ft. The roadway will be developed as a 3-lane (2 thru lanes with a TWLTL) shoulder sectioned roadway. Alignment of the roadway is assumed to be along the existing Paul Hand Road centerline; however, we will also look at shifting Paul Hand Road to the south to eliminate r/w requirements from the north side of the road. There is an existing culvert approximately 250 feet west of the intersection with Graham Road that will need replaced.

Paul Hand Road and Graham Road intersection improvements: This project will include the development of a roundabout at the intersection of Graham Road and Earlywood Road. The roundabout will be based on conceptual exhibits prepared by our office in 2022, and will tie into the new Paul Hand Road section to the west, and existing legs of the intersection on the north, south, and east side.

We have based our Fee Proposal on the aforementioned assumptions, and the following scope of work items are included to assist you in the development of this project:

A. TOPOGRAPHIC SURVEY & ROUTE SURVEY

CrossRoad Engineers will survey the project limits in order to produce a topographic base map and Location Control Route Survey in accordance with applicable Indiana Code. Upon the completion of the field work, we will establish all section lines, right of way lines, and property lines per deeds and platted subdivisions; complete all survey line work; generate the TIN surface model and also create one-foot interval contours; and add all relative survey notes to the drawings. Included will be information such as one-foot contouring, existing street elevations, existing sanitary and storm structures, and verification of existing utilities. This survey will also include all research, office work, and field work necessary to complete the Route Survey.

The City (through the developer) has provided digital survey information for most of the new alignment length of Essex Drive, which we will utilize for our design.

B. ROAD DESIGN & PLAN PREPARATION

In general, this task involves the preparation of design plans and bidding documents to allow the proposed project to be constructed. We will prepare plans, specifications, and estimates of cost, which shall be in accordance with the accepted standards for such work and in general accordance with the following documents in effect as of the Effective Date of this Agreement: American Association of State Highway and Transportation Officials' "A Policy on Geometric Design of Highways and Streets"; Indiana Manual on Uniform Traffic Control Devices; and, Indiana Design Manual.

Construction drawings will be prepared in accordance with state and local laws and ordinances and will include the following:

- Title Sheet
- Route Survey
- Roadway Construction Details
 - Road Plan & Profiles
 - Construction Details
 - Road Cross Sections
- Intersection Construction Details
 - Grading spot elevations
 - Pavement marking
- Maintenance of Traffic Plan
 - INDOT/MUTCD standards
- Stormwater Drainage Design
 - Plan and profiles as necessary
 - Drainage structure details
- Erosion Control Plan
 - Consistent with local MS4 requirements for Rule 5 conformance
- Miscellaneous Details and Specifications

It is assumed that the roadways constructed will have heavier than typical truck traffic due to the development in the area. City standards will be utilized for the pavement sections required; therefore, no geotechnical or pavement design have been included in this proposal. It is assumed that the roundabout will be concrete, similar to others constructed in the City. Lighting will be designed for the roundabout only, using similar poles as have been installed throughout the City.

For maintenance of traffic, we assume that the improvements on Paul Hand Road and the roundabout will be constructed at the same time. Maintenance of traffic for Essex Road extension can be independent of the other project segments.

C. UTILITY COORDINATION

CrossRoad Engineers shall coordinate with the representatives from each of the utility companies having facilities located within the project area. We will communicate any relocation of facilities that may be needed and then review the relocation plans that the utility companies prepare. We will review any reimbursable claims by the utilities and coordinate as necessary. This task does not include work associated with field locating the vertical depth of any utilities. Although no 'potholing' of facilities is anticipated to be required, it is assumed that the utility companies will be responsible for performing this work on their own facilities. This work shall be in general accordance with INDOT policy and procedures in effect as of the Effective Date of this Agreement. This scope of work only addresses utility coordination through the design process. Utility coordination services during the construction phase will be provided as needed on an hourly basis as part of the Inspection Services.

D. PUBLIC INFORMATION MEETING

CONSULTANT shall prepare display materials for and present the proposed project at a scheduled meeting for the City.

E. REGULATORY SUBMITTALS & BIDDING PHASE

It is anticipated the construction of these projects will disturb more than one acre of ground and therefore an Indiana Department of Environmental Management (IDEM) Construction Stormwater General Permit (old Rule 5) will be required. CrossRoad will prepare a Storm Water Pollution Prevention Plan, submittal of public notice, and permit application forms. An IDEM 401 / ACOE 404 is anticipated due to the culvert replacement, as well as a legal drain permit through the Johnson County Surveyor.

This phase will include the preparation of an Engineer's Estimate for the overall project, as well as the necessary administrative services required for compiling bid documents and facilitating and reviewing the public bid of the project. It is assumed that all 3 project segments will be let under one construction contract with one bid book. This phase does not include the acquisition of any construction or building permits through any agency as permitting shall be the responsibility of the selected contractor.

F. RIGHT OF WAY ENGINEERING

CONSULTANT shall perform Right of Way Engineering work consisting of preparing right of way plans, property plats, and legal descriptions for those right of way parcels that need to be acquired for the project. There are expected to be 12 parcels of land to be acquired. This effort also includes a 20-year title research for the permanent right of way to be acquired. All of this work will be completed in accordance with the Right of Way Engineering Procedure Manual, hereinafter called the MANUAL, 865 I.A.C. 1-12.

G. RIGHT OF WAY ACQUISITION SERVICES

This work includes the management and all of the activities necessary to procure the required parcels of right of way. These activities include the appraisals, buying of right of way, right of way management, and RW staking. Also, transfer documents will be prepared and recorded. If requested, the proposed right of way will be field staked.

H. CONSTRUCTION INSPECTION & AS-BUILT PLANS

Once design is complete, CrossRoad Engineers will perform construction inspection and as-built plans for this project as directed by the City. The construction is expected to occur in 2023 and this work will be provided on an hourly basis per an attached Hourly Billing Rate similar to the one included as Attachment "B".

I. METHOD FOR PAYMENT OF ENGINEERING FEES

During this work, progress invoices will be prepared for the portions of the work done to date based on the Fee Schedule included with this document as Attachment "A". These invoices will be submitted by the 5th of each month and will become due by the 30th of that same month. Invoices not paid within 30 days after submission to you will accrue interest at a rate of 1.5% per month. Should the City decide to cancel the project at any time, all phases that have been worked on will be invoiced up to that time of project termination.

J. UNDERSTANDINGS

For additional services not covered herein, the work will be performed as authorized by you at a mutually agreed upon rate. Costs incurred due to agency applications for plan review and approval, postage for plan distribution, public notifications, recording fees, and other direct costs shall be invoiced separately as a reimbursable with a 15% administrative charge. Payment for these items will not be the responsibility of CrossRoad Engineers. Acceptance of this proposal is inclusive of the Terms and Conditions included below.

We are ready to begin and appreciate your allowing CrossRoad Engineers to design and inspect this project for you. If you have any questions, please call me at 317-780-1555 ext. 114.

Sincerely,

CrossRoad Engineers, PC
